SUMMARY TABLES **I 40**

INTRODUCTION

Project Overview

This 2008 Broward County Quality of Life Assessment represents the seventh such research effort conducted in Broward County since the first in 1994.

Community Definition

The “community” defined for this assessment includes each of the ZIP Codes comprising Broward County. The following map describes this geographical definition.

Methodology

Quality of Life Survey

A precise and carefully executed methodology is critical in asserting the validity of the results gathered in the *2008 PRC Quality of Life Survey*. Thus, to ensure the best representation of the population surveyed, a telephone interview methodology was employed. The primary advantages of telephone interviewing are timeliness, efficiency and random selection capabilities.

Sample Design

The sample design used for this effort consisted of a random sample of 1,009 individuals aged 18 and older in the defined community of Broward County. Once these data were collected, the sample was weighted in proportion to the actual population distribution at the ZIP Code level. Population estimates were based on census projections of adults aged 18 and over provided in the latest *ESRI BIS Demographic Portfolio*.

All administration of the surveys, data collection and data analysis was conducted by Professional Research Consultants, Inc. (PRC).

Sampling Error

For statistical purposes, the maximum rate of error associated with a sample size of 1,009 respondents is $\pm 3.1\%$ at the 95 percent level of confidence.

**Expected Error Ranges for a Sample of 1,009
Respondents at the 95 Percent Level of Confidence**

Note: The "response rate" (the percentage of a population giving a particular response) determines the error rate associated with that response. A "95 percent level of confidence" indicates that responses would fall within the expected error range on 95 out of 100 trials.

Example 1: For example, if 10% of the sample of 1,000 respondents answered a certain question with a "yes," it can be asserted that between 8.1% and 11.9% ($10\% \pm 1.9\%$) of the total population would offer this response.

Example 2: If 50% of respondents said "yes," one could be certain with a 95 percent level of confidence that between 46.9% and 53.1% ($50\% \pm 3.1\%$) of the total population would respond "yes" if asked this question.

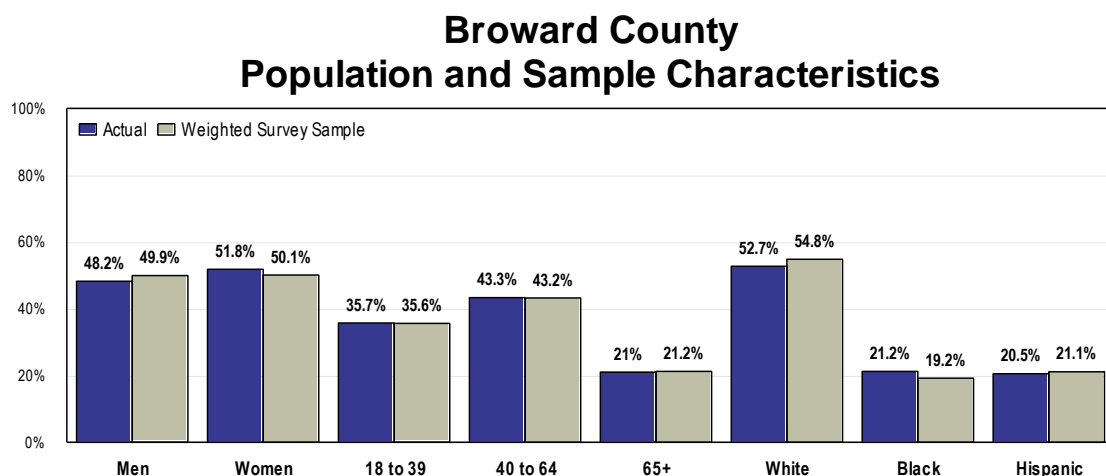

In addition, for further analysis, keep in mind that each percentage point recorded among the total sample of survey respondents is representative of approximately 13,615 residents aged 18 and older in Broward County (based on current population estimates). Thus, in a case where 3.4% of the total sample gives a particular response to a survey question, this is representative of approximately 46,290 people and therefore must not be dismissed as too small to be significant.

Also, for purposes of this study, comparisons are made to the 1994, 1997, 1999, 2002, 2004 and 2006 survey findings [conducted in Broward County by PRC] where possible and applicable throughout the report.

Sample Characteristics

To accurately represent the population studied, PRC strives to minimize bias through application of a proven telephone methodology and random-selection techniques. And, while this random sampling of the population produces a highly representative sample, it is a common and preferred practice to “weight” the raw data to improve this representativeness even further. This is accomplished by adjusting the results of a random sample to match the demographic characteristics of the population surveyed (poststratification), so as to eliminate any naturally occurring bias. Specifically, once the raw data are gathered, respondents are examined by key demographic characteristics (namely gender, age, race, ethnicity, and poverty status) and a statistical application package applies weighting variables that produce a sample which more closely matches the population for these characteristics. Thus, while the integrity of each individual’s responses is maintained, one respondent’s responses may contribute to the whole the same weight as, for example, 1.1 respondents. Another respondent, whose demographic characteristics may have been slightly oversampled, may contribute the same weight as 0.9 respondents.

The following chart outlines the characteristics of the sample for key demographic variables, compared to actual population characteristics revealed in census data. [Note that the sample consisted solely of area residents aged 18 and older; data on children were given by proxy by the person most responsible for that child’s health care needs, and these children are not represented demographically in this chart.]

Sources: • ESRI BIS Demographic Portfolio
• 2008 PRC Quality of Life Survey, Professional Research Consultants

Further note that the poverty descriptions and segmentation used in this report are based on 2008 administrative poverty thresholds determined by the U.S. Department of Health & Human Services. These guidelines define poverty status by household income level and number of persons in the household (e.g., the 2008 guidelines place the poverty threshold for a family of four at \$21,200 annual household income or lower). In sample segmentation: “<200% FPL” (or “<200% of the Federal Poverty Level”) refers to community members living in a household with defined poverty status, combined with those households living just above the poverty level, earning up to twice the poverty threshold; and “200%+ FPL” refers to households with incomes more than twice the poverty threshold defined for their household size.

The sample design and the quality control procedures used in the data collection ensure that the sample is representative. Thus, the findings may be generalized to the total population of community members in Broward County with a high degree of confidence.

Benchmark Data

Statewide Risk Factor Data

Statewide risk factor data are provided where available as an additional benchmark against which to compare local findings. These data are reported in the most recent *BRFSS (Behavioral Risk Factor Surveillance System) Summary Prevalence Reports* published by the Centers for Disease Control and Prevention and the U.S. Department of Health & Human Services.

Nationwide Risk Factor Data

Nationwide risk factor data, which are also provided in comparison charts, are taken from the *2008 PRC National Health Survey*. The methodological approach for the national study is identical to that employed in this assessment, and these data may be generalized to the U.S. population with a high degree of confidence.

Healthy People 2010

Healthy People 2010: Understanding and Improving Health is part of the Healthy People 2010 initiative that is sponsored by the U. S. Department of Health & Human Services. Healthy People 2010 outlines a comprehensive, nationwide health promotion and disease prevention agenda. It is designed to serve as a roadmap for improving the health of all people in the United States during the first decade of the 21st century.

“With [specific] health objectives in 28 focus areas, Healthy People 2010 will be a tremendously valuable asset to health planners, medical practitioners, educators, elected officials, and all of us who work to improve health. Healthy People 2010 reflects the very best in public health planning—it is comprehensive, it was created by a broad coalition of experts from many sectors, it has been designed to measure progress over time, and, most important, it clearly lays out a series of objectives to bring better health to all people in this country.”
— Donna E. Shalala, (Former) Secretary of Health & Human Services

Like the preceding Healthy People 2000 initiative—which was driven by an ambitious, yet achievable, 10-year strategy for improving the nation’s health by the end of the 20th century—Healthy People 2010 is committed to a single, overarching purpose: promoting health and preventing illness, disability and premature death.

HEALTH

Self-Reported Health Status

This section describes Broward County residents' perceived health status, including physical, mental, and emotional health.

In Broward County, 68.0% of adults view their collective physical, mental, and emotional health as "excellent" or "very good."

- Another 21.8% gave "good" evaluations, while 10.2% say that their general health status is overall "fair" or "poor."

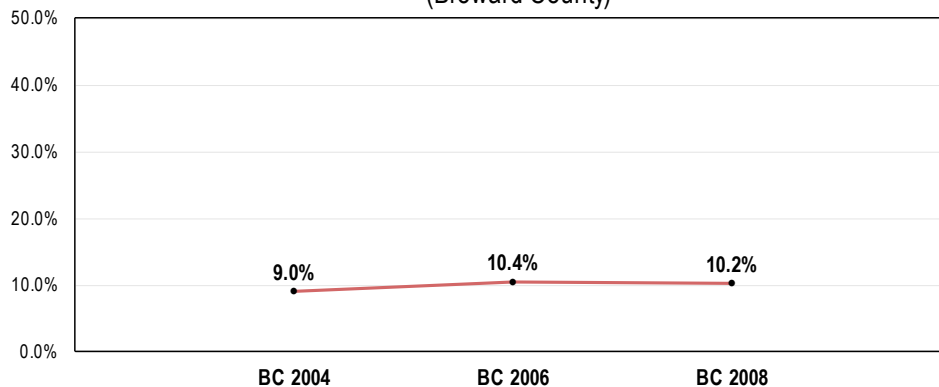

Self-Reported Health Status
(Including Physical, Mental, and Emotional Health)
(Broward County)

Source: • 2008 PRC Quality of Life Survey, Professional Research Consultants [Item 5]
Note: • Reflects the total sample of respondents.

- TREND:** The percentage of Broward County residents who consider their health to be "fair" or "poor" (10.2%) is statistically unchanged from the 9.0% reported countywide in 2004.

Self-Reported Health Status is "Fair" or "Poor"
(Including Physical, Mental, and Emotional Health)
(Broward County)

Source: • PRC Quality of Life Surveys, Professional Research Consultants [Item 5]
Note: • Asked of all respondents.

By key demographic characteristics, a much higher prevalence of “fair” or “poor” health is reported among:

- Residents without a postsecondary education.
- Those living at lower incomes.
- Blacks.
- Note the positive correlation between age and “fair/poor” status.

Experience "Fair" or "Poor" Physical, Mental, and Emotional Health (Broward County)

Source: • 2008 PRC Quality of Life Survey, Professional Research Consultants [Item 5]
 Notes: • Demographic breakouts are among findings in Broward County in 2008.
 • Asked of all respondents.

Activity Limitation & Disability

Activity Limitations

Survey respondents were next asked whether a physical, psychological, or cognitive impairment or health problem prevents them from working at a job, a business, or maintaining self-employment.

A total of 10.8% of respondents currently report a limitation which prevents their employment.

By key demographic characteristics, adults more likely to report that a limitation prevents their employment include the following population segments:

- Residents aged 65+.
- Those without education beyond high school.
- Those living at lower incomes.

A Limitation Currently Prevents Employment

(Broward County)

Source: • 2008 PRC Quality of Life Survey, Professional Research Consultants [Item 70]

Notes: • Demographic breakouts are among findings in Broward County in 2008.

• Asked of all respondents.

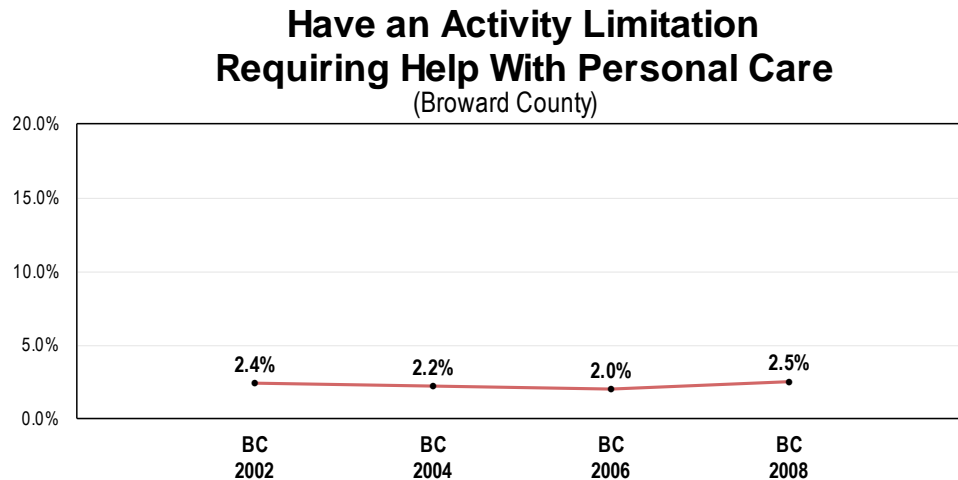

• In this case the term "limitation" includes a physical, psychological, or cognitive impairment or health problem.

Among those residents who do not currently experience a limitation which precludes their employment, 6.2% report that they are limited in *the kind or amount* of employment activities they can do because of an impairment.

Survey respondents were next asked to indicate whether they currently require the assistance of others for *personal care* (including bathing, dressing, eating) or routine needs (such as household chores or shopping).

2.5% of survey respondents have an activity limitation requiring help with personal care.

TREND: Nearly identical to the 2.4% prevalence reported across Broward County in 2002.

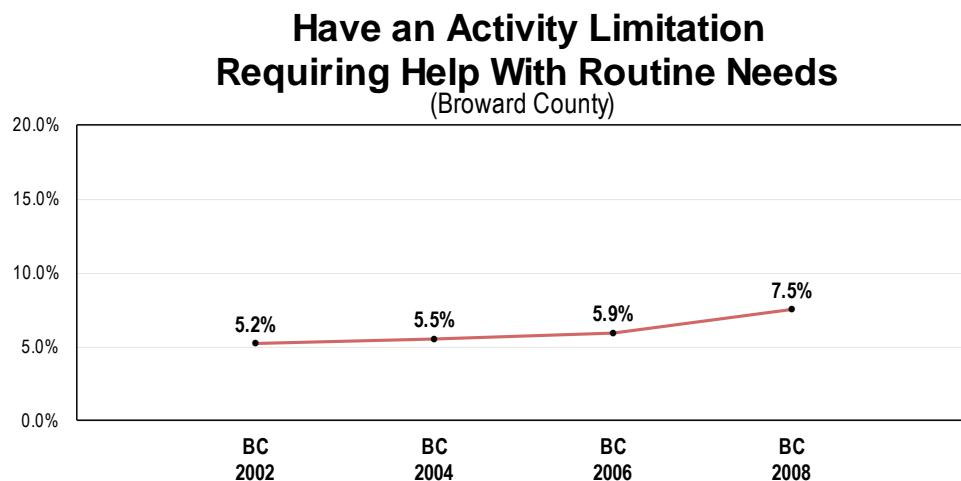

Source: • PRC Quality of Life Surveys, Professional Research Consultants [Item 72]

Notes: • Asked of all respondents.

• In this case the term "personal needs" includes eating, bathing, dressing, or getting around the house.

7.5% of Broward County survey respondents have an activity limitation requiring help with routine needs.

TREND: Less favorable than the 5.2% prevalence reported locally in 2002.

Source: • PRC Quality of Life Surveys, Professional Research Consultants [Item 73]

Notes: • Asked of all respondents.

• In this case the term "routine needs" includes everyday household chores, doing necessary business, shopping, or getting around for other purposes.

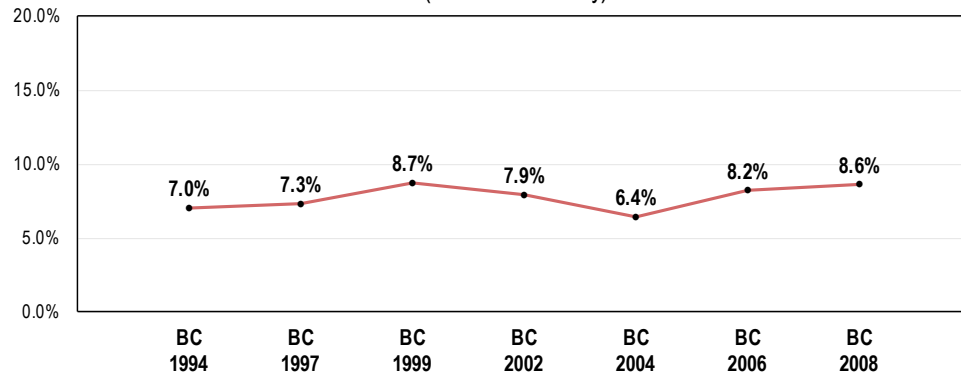

Disabilities

Mobility

8.6% of community adults report a disability requiring assistance in moving or walking.

TREND: Unchanged from the prevalence of disabilities reported countywide in 1994.

**Prevalence of Disability
Requiring Assistance in Walking/Moving**
(Broward County)

Source: • PRC Quality of Life Surveys, Professional Research Consultants [Item 23]
Note: • Asked of all respondents.

Vision

A total of 30.7% of county residents indicate that they or a member of their household is visually impaired.

TREND: No change since the 33.9% reported in 1999, despite a *statistically significant decrease* in vision impairment in Broward County from 1999 to 2006.

Prevalence of Vision Impairment
(Broward County)

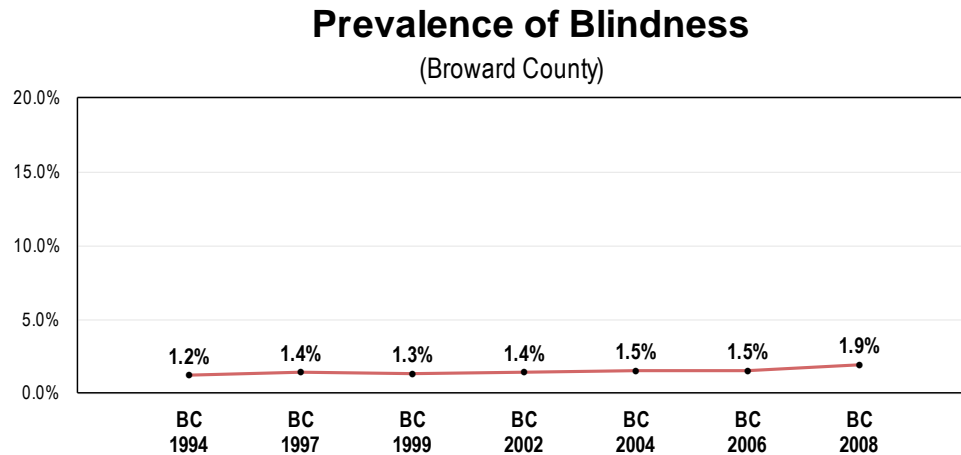

Source: • PRC Quality of Life Surveys, Professional Research Consultants [Item 21]
Note: • Asked of all respondents.

Blindness

A total of 1.9% of survey respondents report that they or a member of their household is blind.

TREND: Statistically unchanged from the 1.2% prevalence recorded across the county in 1994.

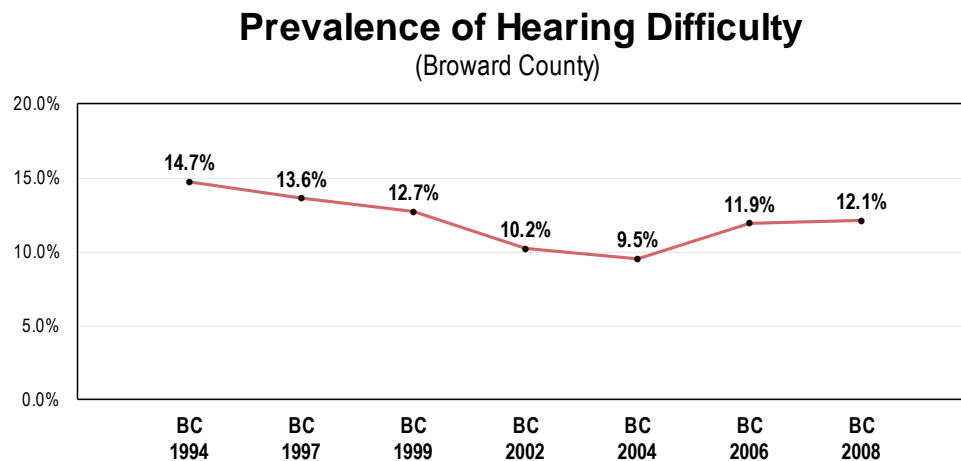

Source: • PRC Quality of Life Surveys, Professional Research Consultants [Item 22]
Note: • Asked of all respondents.

Hearing

A total of 12.1% of respondents indicate that they or a member of their household has a hearing difficulty.

TREND: This proportion has risen over the past few years, but remains below initial findings in 1994.

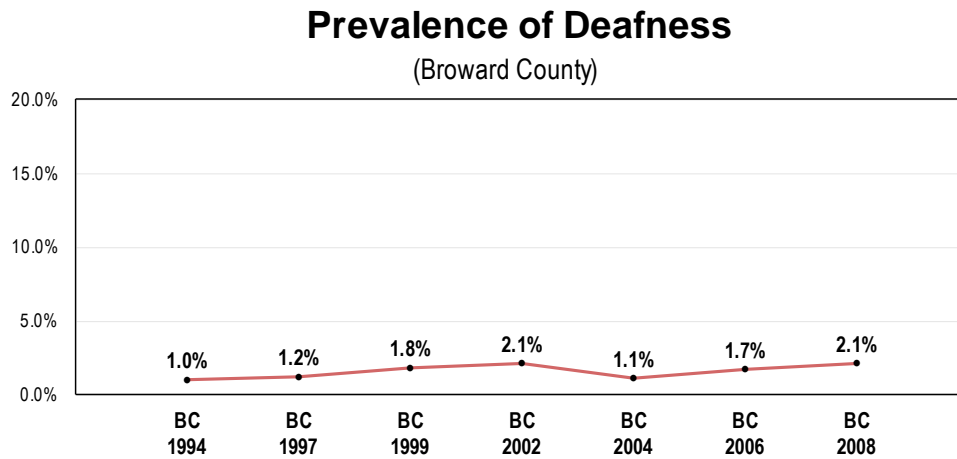

Source: • PRC Quality of Life Surveys, Professional Research Consultants [Item 18]
Note: • Asked of all respondents.

Deafness

Just 2.1% of community members report that they or a member of their household suffer from deafness.

TREND: Less favorable than the 1.0% prevalence reported locally in 1994.

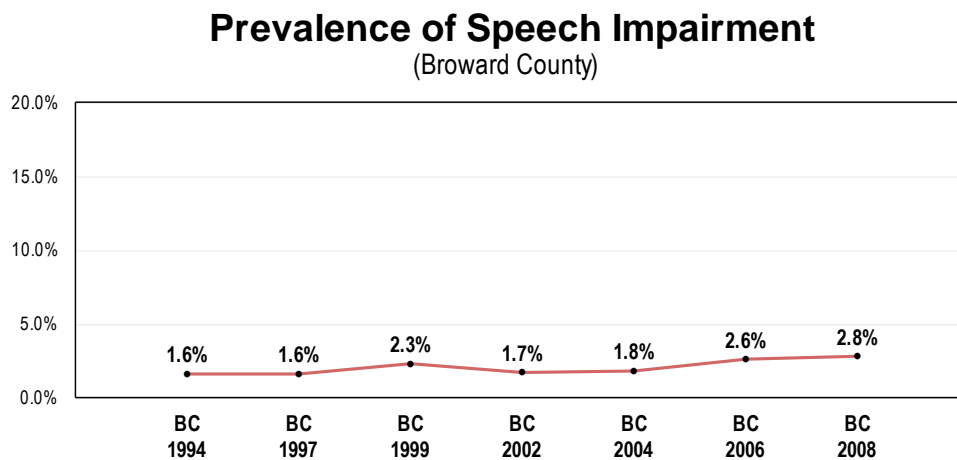

Source: • PRC Quality of Life Surveys, Professional Research Consultants [Item 19]
Note: • Asked of all respondents.

Speech

2.8% of survey respondents indicate that they or a member of their household has a speech impairment.

TREND: Higher than the 1.6% reported throughout Broward County in 1994.

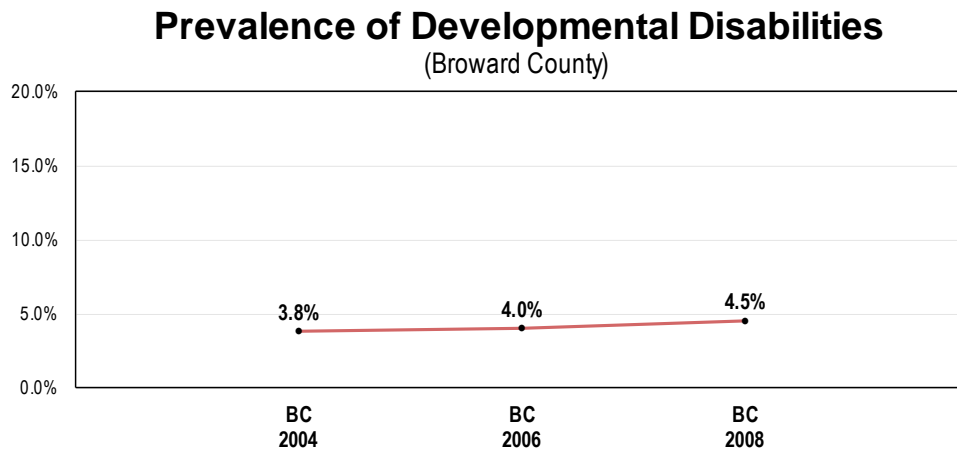

Source: • PRC Quality of Life Surveys, Professional Research Consultants [Item 20]
Note: • Asked of all respondents.

Developmental & Mental Disabilities

In a related inquiry, local adults were asked to report on the prevalence of a developmental or mental disability.

4.5% of survey respondents indicate that they or a member of their household has a developmental disability.

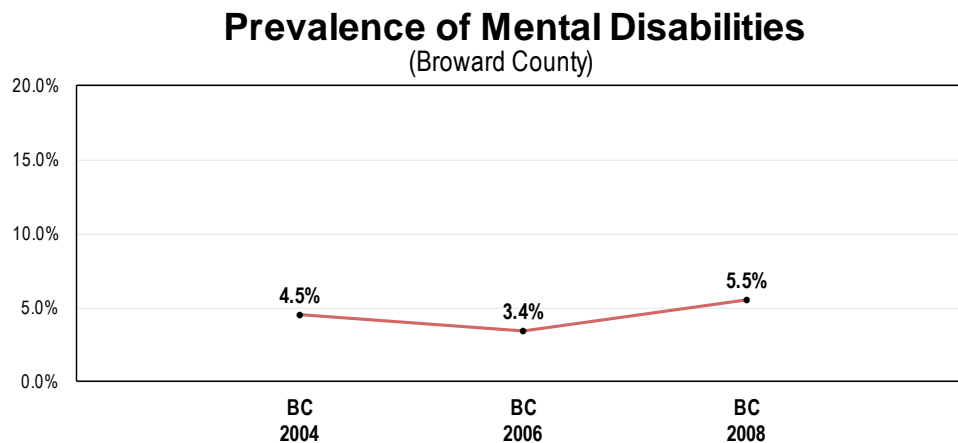

TREND: Statistically unchanged from the 3.8% prevalence reported locally in 2004.

Source: • PRC Quality of Life Surveys, Professional Research Consultants [Item 24]
Note: • Asked of all respondents.

Another 5.5% of Broward adults report that they or a member of their household has a mental disability.

TREND: Statistically comparable to the 4.5% prevalence recorded countywide in 2004.

Source: • PRC Quality of Life Surveys, Professional Research Consultants [Item 25]
Note: • Asked of all respondents.

Caregivers

Roughly one-fifth (22.0%) of Broward County adults are currently caregivers for another person.

TREND: Statistically similar to the 19.4% reported in Broward County in 1999.

Current Caregiver for Another Person (Broward County)

Source: • PRC Quality of Life Surveys, Professional Research Consultants [Item 74]
Note: • Asked of all respondents.

When asked to indicate the relation that these caregivers are to the recipients of the care, 26.9% reported that they are the **mothers**, while 15.1% of these caregivers are **daughters** of the people receiving the care. Another 9.9% of caregivers are **spouses** of the people requiring care, while 9.5% are **sons** and 7.1% are **fathers**. A total of 5.4% of the caregivers are **friends** of the person receiving the care and 3.2% are the **sisters**. The age of the person receiving care ranged from infancy to 99.

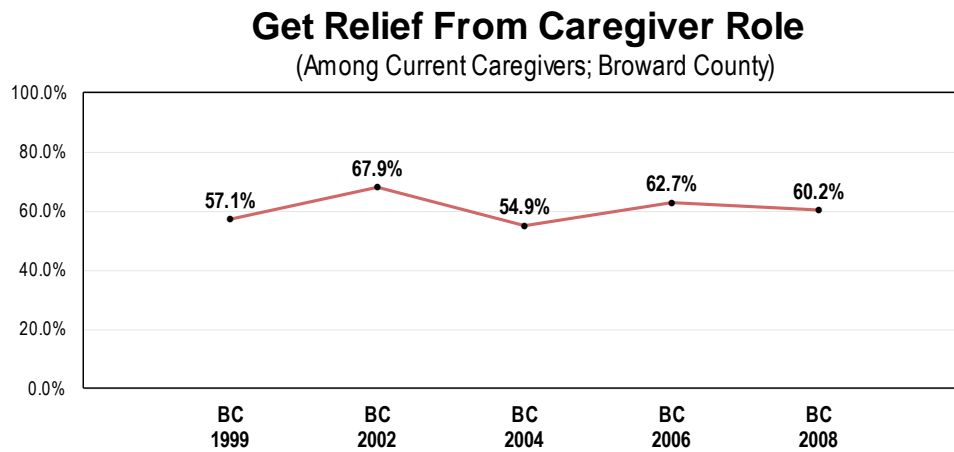

Relationship to Person Receiving Care (Among Current Caregivers in Broward County)

Source: • PRC Quality of Life Survey, Professional Research Consultants [Items 75-76]
Note: • Asked of those respondents who are current caregivers.

Finally, the local adults who currently act as caregivers to another were asked whether they get any relief from their caregiver role.

- Six in 10 (60.2%) caregivers report that they do get relief from their roles as caregivers.
- ▣ **TREND:** Statistically comparable to the 57.1% of caregivers who reported receiving relief from their roles as caregivers during the 1999 survey across Broward County.

Source: • PRC Quality of Life Surveys, Professional Research Consultants [Item 77]
Note: • Asked of those respondents who are currently caregivers to another person.

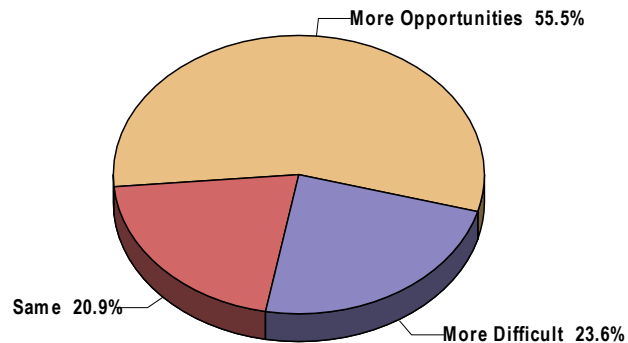

Opportunities for the Disabled

Regarding people with disabilities in the community, more than one-half (55.5%) of local adults perceive there to be more opportunities now for the disabled.

- 20.9% feel there are the same amount of opportunities and 23.6% of local adults think that it is more difficult now for people with disabilities.

TREND: Marks a statistically significant increase from the 16.4% "more difficult" prevalence reported countywide in 1997.

Rating of Opportunities for the Disabled in the Community Compared to Those in the Past
(Broward County)

Source: • 2008 PRC Quality of Life Survey, Professional Research Consultants [Item 97]
Note: • Asked of all respondents.

Perceive Things to be "More Difficult" for the Community's Disabled Now Than in the Past
(Broward County)

Source: • PRC Quality of Life Surveys, Professional Research Consultants [Item 97]
Note: • Asked of all respondents.

Morbidity

“Morbidity” is defined as the rate of disease or the proportion of diseased persons in a given locality. The following section outlines data relating to the prevalence of various conditions in Broward County.

Hypertension (High Blood Pressure)

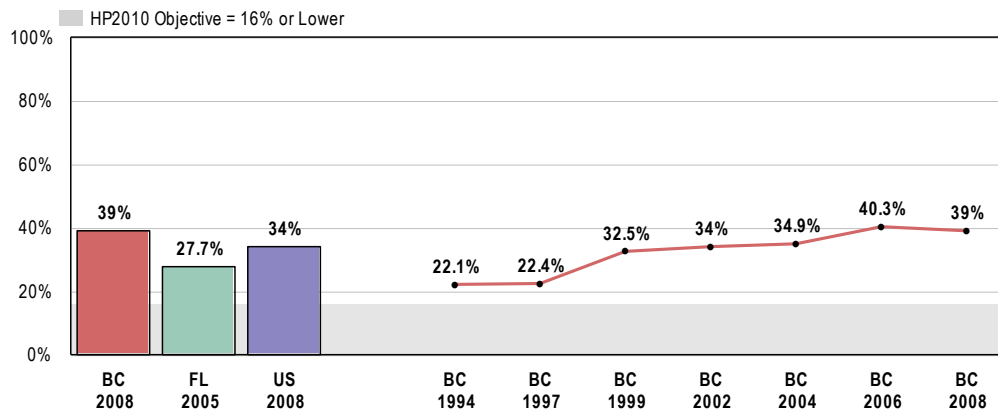

High blood pressure is known as the “silent killer” and remains a major risk factor for coronary heart disease, stroke, and heart failure. About 50 million adults in the United States have high blood pressure.

– Healthy People 2010, 2nd Edition. U.S. Department of Health and Human Services. Washington, DC: U.S. Government Printing Office, November 2000.

A total of 4 in 10 community members have been told at some point that their blood pressure was high.

- Specifically, 27.5% of adults in Broward County have been told more than once that their blood pressure was high, while 11.5% have been told this only once.
 - Higher than the percentage found statewide (27.7%).
 - Less favorable than the 34.0% reported nationwide.
 - Fails to satisfy the Healthy People 2010 objective of 16% or lower.
- TREND:** This year’s prevalence of hypertension marks a *statistically significant increase* from the 22.1% reported across Broward County in 1994.

Have Been Told Blood Pressure Was High

Sources: • PRC Quality of Life Surveys, Professional Research Consultants [Item 11]
 • Behavioral Risk Factor Surveillance System, Centers for Disease Control, 2005 Florida Data
 • 2008 PRC National Health Survey, Professional Research Consultants
 • Healthy People 2010, National Center for Health Statistics/CDC/Public Health Service

Note: • Reflects the total sample of respondents.

Adults more likely to report having hypertension include:

- By age adults 40 and older--rates vary from 17.1% among adults under 40 to 66.7% among those 65 and older.
- Those without a postsecondary education.
- Those living at lower incomes.
- Whites and Blacks.

Sources: • 2008 PRC Quality of Life Survey, Professional Research Consultants [Item 11]
 • Healthy People 2010, National Center for Health Statistics/CDC/Public Health Service

Notes: • Demographic breakouts are among findings in Broward County in 2008.
 • Reflects the total sample of respondents.

High Blood Cholesterol

High blood cholesterol is a major risk factor for coronary heart disease that can be modified. More than 50 million U.S. adults have blood cholesterol levels that require medical advice and treatment. More than 90 million adults have cholesterol levels that are higher than desirable. Experts recommend that all adults aged 20 years and older have their cholesterol levels checked at least once every 5 years to help them take action to prevent or lower their risk of coronary heart disease. Lifestyle changes that prevent or lower high blood cholesterol include eating a diet low in saturated fat and cholesterol, increasing physical activity, and reducing excess weight.

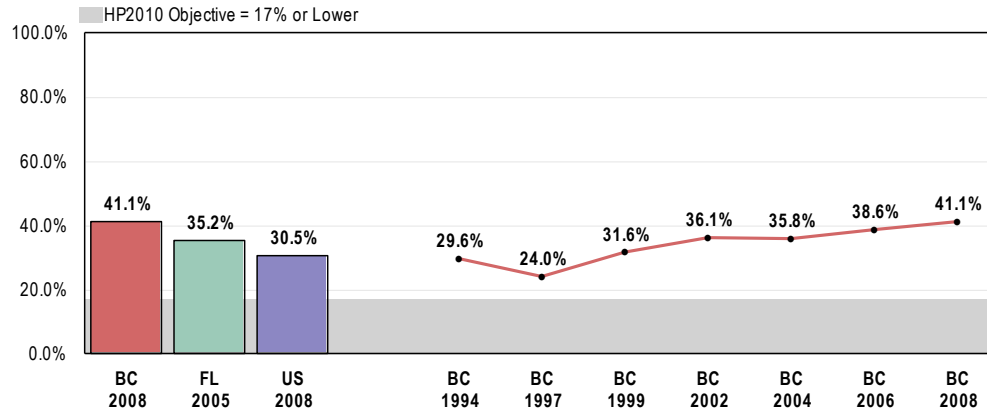

– Healthy People 2010, 2nd Edition. U.S. Department of Health and Human Services. Washington, DC: U.S. Government Printing Office, November 2000.

A total of 41.1% of adults in Broward County have been told by a health care professional that their cholesterol level was high.

- Less favorable than the 35.2% found across Florida.
- Higher than the 30.5% prevalence found throughout the United States.

- **TREND:** Marks a *statistically significant increase* from the 29.6% prevalence reported across Broward County in 1994 (even more pronounced when compared with 1997 results).

Have Been Told That Blood Cholesterol Level Was High

Sources:

- PRC Quality of Life Surveys, Professional Research Consultants [Item 12]
- Behavioral Risk Factor Surveillance System, Centers for Disease Control, 2005 Florida Data
- 2008 PRC National Health Survey, Professional Research Consultants
- Healthy People 2010, National Center for Health Statistics/CDC/Public Health Service

Note:

- Reflects the total sample of respondents.

Broward County residents more likely to have been diagnosed with high cholesterol levels include:

- Adults aged 40 and older.
- Whites.

Have Been Told That Blood Cholesterol Level Was High (Broward County)

Source:

- 2008 PRC Quality of Life Survey, Professional Research Consultants [Item 12]
- Healthy People 2010, National Center for Health Statistics/CDC/Public Health Service

Notes:

- Demographic breakouts are among findings in Broward County in 2008.
- Reflects the total sample of respondents.

Diabetes

Diabetes affects nearly 16 million Americans and contributes to about 200,000 deaths a year. Diabetes can cause heart disease, stroke, blindness, kidney failure, leg and foot amputations, pregnancy complications, and deaths related to influenza and pneumonia. About 5.4 million Americans are unaware they have the disease.

- Among U.S. adults, diagnosed diabetes (including gestational diabetes) increased 49% from 1990 to 2000. The largest increase was among people aged 30-49, Type 2 affects 90%–95% of people with diabetes and is linked to obesity and physical inactivity.
- More than 18% of U.S. adults older than age 65 have diabetes.
- Diabetes affects more women than men.
- The direct and indirect costs of diabetes in America are nearly \$100 billion a year.

– National Center for Chronic Disease Prevention and Health Promotion, Centers for Disease Control and Prevention

A total of 11.4% of Broward County residents surveyed indicate having diabetes.

- Less favorable than the 8.8% found throughout Florida.
- Similar to the 11.1% recorded nationally.

TREND: Denotes a statistically significant increase from the 6.0% prevalence recorded in 1994.

Diabetes Prevalence

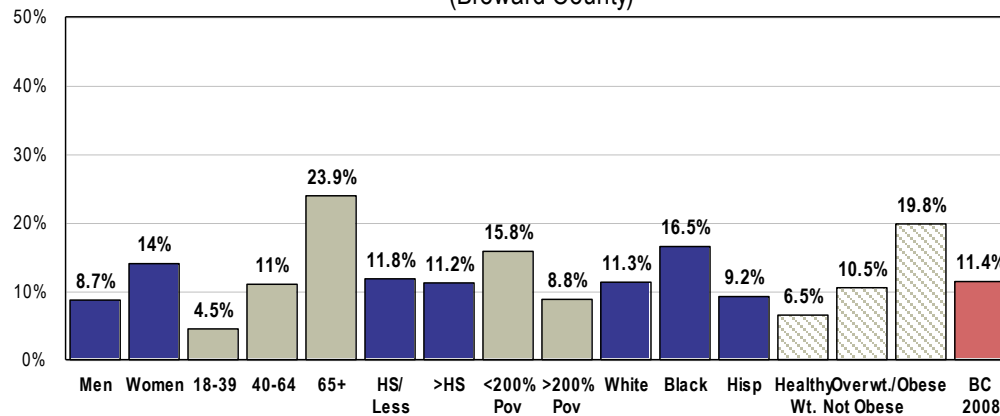

Sources: • PRC Quality of Life Surveys, Professional Research Consultants [Item 13]
 • Behavioral Risk Factor Surveillance System, Centers for Disease Control and Prevention
 • 2008 PRC National Health Survey, Professional Research Consultants
 Note: • Reflects the total sample of respondents.

The following demographic breakouts are more likely to be diabetic:

- Women.
- Adults aged 65 and older.
- Adults living below the 200% Federal Poverty Level.
- Obese individuals.

Diabetes Prevalence

(Broward County)

 Notes: • Demographic breakouts are among findings in Broward County in 2008.
 • Reflects the total sample of respondents.

AIDS Testing & Perceived Risk

In the United States, HIV/AIDS remains a significant cause of illness, disability, and death, despite declines in 1996 and 1997.

Behaviors (sexual practices, substance abuse, and accessing prenatal care) and biomedical status (having other STDs) are major determinants of HIV transmission. Unprotected sexual contact, whether homosexual or heterosexual, with a person infected with HIV and sharing drug-injection equipment with an HIV-infected individual account for most HIV transmission in the United States. Increasing the number of people who know their HIV serostatus is an important component of a national program to slow or halt the transmission of HIV in the United States.

For persons infected with HIV, behavioral determinants also play an important role in health maintenance. Although drugs are available specifically to prevent and treat a number of opportunistic infections, HIV-infected individuals also need to make lifestyle-related behavioral changes to avoid many of these infections. The new HIV antiretroviral drug therapies for HIV infection bring with them difficulties in adhering to complex, expensive, and demanding medication schedules, posing a significant challenge for many persons infected with HIV.

Because HIV infection weakens the immune system, people with tuberculosis (TB) infection and HIV infection are at very high risk of developing active TB disease.

Comparing the 1980s to the 1990s, the proportion of AIDS cases in white men who have sex with men *declined*, whereas the proportion in females and males in other racial and ethnic populations *increased*, particularly among Black Americans and Hispanics. AIDS cases also appeared to be *increasing* among injection drug users and their sexual partners. The true extent of the epidemic remains difficult to assess for several reasons, including the following:

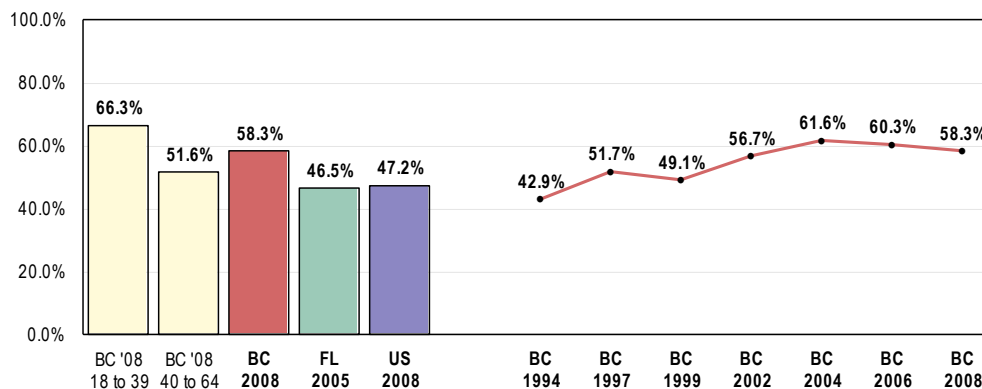

- Because of the long period of time from initial HIV infection to AIDS and because highly active antiretroviral therapy (HAART) has slowed the progression to AIDS, new cases of AIDS no longer provide accurate information about the current HIV epidemic in the United States.
- Because of a lack of awareness of HIV serostatus as well as delays in accessing counseling, testing, and care services by individuals who may be infected or are at risk of infection, some populations do not perceive themselves to be at risk. As a result, some HIV-infected persons are not identified and provided care until late in the course of their infection.

– Healthy People 2010, 2nd Edition. U.S. Department of Health and Human Services. Washington, DC: U.S. Government Printing Office, November 2000.

Nearly 6 in 10 (58.3%) Broward County adults aged 18 through 64 have been tested for the AIDS virus.

- Higher the 46.5% prevalence noted across Florida.
 - Also higher than the 47.2% reported among adults under 65 nationwide.
 - Includes 66.3% of adults under 40 and 51.6% of those aged 40 to 64.
- ▣ **TREND:** Marks a *statistically significant increase* from the 42.9% reported across the county in 1994.

Have Been Tested for the AIDS Virus (18-64)

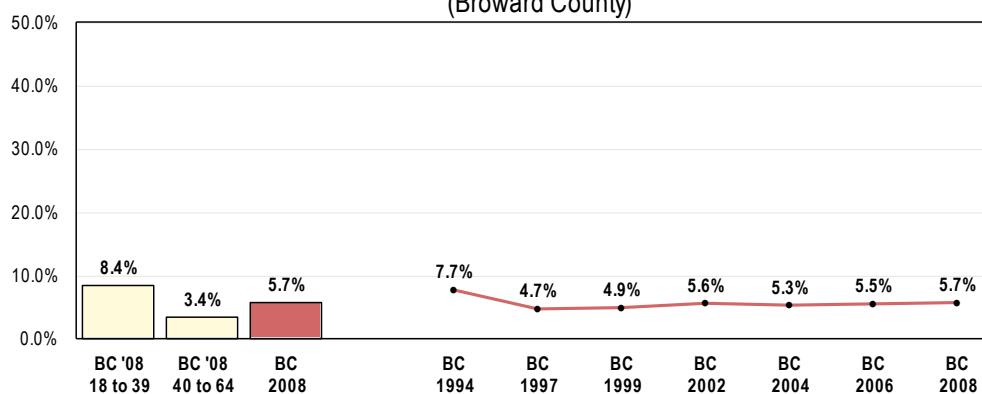

Sources: • PRC Quality of Life Surveys, Professional Research Consultants [Item 193]
 • Behavioral Risk Factor Surveillance System, Centers for Disease Control, 2005 Florida Data
 • 2008 PRC National Health Survey, Professional Research Consultants
 Note: • Reflects those respondents aged 18 through 64.

A total of 5.7% of Broward County adults under 65 consider themselves to be at "medium" to "high" risk for contracting the AIDS virus.

- Ranges from 8.4% among adults under 40 to 3.4% among those aged 40 to 64.

TREND: Statistically similar to the 7.7% reported in 1994.

High/Medium Chance of Contracting the AIDS Virus (18-64) (Broward County)

Source: • PRC Quality of Life Surveys, Professional Research Consultants [Item 180]
 Notes: • Reflects those respondents aged 18 through 64.
 • State and national data not available.

Just over 3 in 4 (76.0%) local adults feel they have no chance of acquiring the AIDS virus.

- Another 18.3% reported a “low” risk. As mentioned previously, 5.7% reported “medium” or “high” risk for the virus.
- When asked, 86.7% of survey respondents indicated that they practice “safe sex.”

Perceived Chances of Getting the AIDS Virus (18-64) (Broward County)

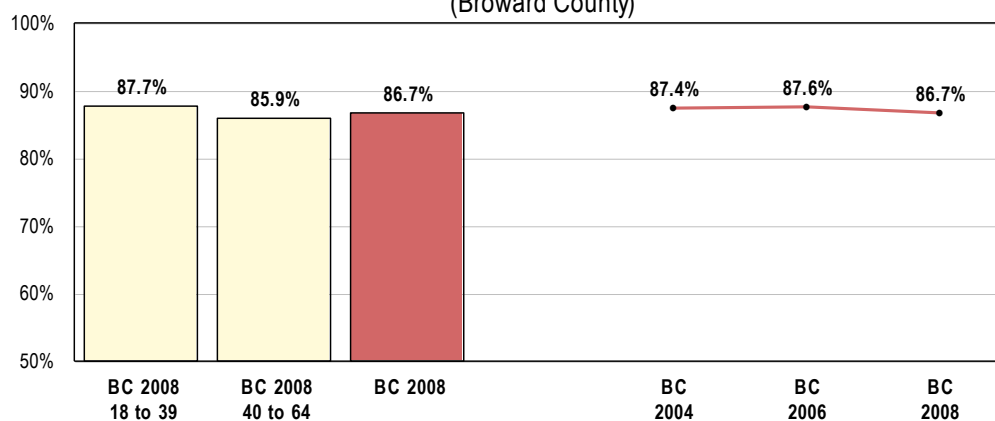

Source: • 2008 PRC Quality of Life Survey, Professional Research Consultants [Items 191-192]
Note: • Asked of those respondents aged 18 through 64.

- The 86.7% of adults under 65 who report practicing safe sex ranges from 87.7% among adults under 40 to 85.9% among those aged 40 to 64 (not a significant difference).

TREND: Statistically unchanged from the 87.4% reported across Broward County in 2004.

Practice Safe Sex (18-64) (Broward County)

Source: • PRC Quality of Life Surveys, Professional Research Consultants [Item 192]
Note: • Reflects those respondents aged 18 through 64.

Adults with postsecondary education are more likely to report practicing safe sex (among adults 18 to 64).

Source: • 2008 PRC Quality of Life Survey, Professional Research Consultants [Item 192]

Notes: • Demographic breakouts are among findings in Broward County in 2008.

• Reflects those respondents aged 18 through 64.

Household Prevalence of Selected Conditions

As part of the 2008 PRC *Quality of Life Survey*, area residents were asked to report the prevalence of any of four various chronic conditions among them or other members of their households.

As shown below, 21.1% of Broward County survey respondents reported that they or a member of their household suffers from diabetes.

TREND: Marks a *statistically significant increase* from the 14.8% reported countywide in 1999.

Another 14.0% of local adults report that they or a member of their household is asthmatic.

TREND: Statistically unchanged from the 16.2% reported across Broward County in 1999.

1.7% of Broward County adults indicate that a member of the household has the human immunodeficiency virus (HIV).

TREND: Statistically unchanged from the 0.9% reported across Broward County in 2002 (*this inquiry was not addressed in the 1999 survey*).

Another 0.8% of survey respondents indicate that a member of the household has the AIDS virus.

TREND: Comparable to the 0.7% prevalence reported countywide in 1999.

Mental Health

The following section outlines general assessments of the community's perceptions about mental health and access to mental health services.

Perceptions of Mental Health Issues

Perceived Consequences of Mental Illness to Society

Survey respondents were asked to relate their perceptions about the biggest consequence of untreated mental illness to our society. While many (25.2%) were uncertain, 19.9% mentioned **crime**, followed by **homelessness** (8.6%), **loss of income** (7.0%), and **suicide** (5.5%).

Perceived Biggest Consequence of Untreated Mental Illness in Our Society (Broward County)

Source: • 2008 PRC Quality of Life Survey, Professional Research Consultants [Item 99]
Note: • Asked of all respondents.

Perceptions About Employment & Mental Health

When asked, 68.0% of survey members indicated that they would employ or recommend for a job someone who has been treated for mental illness. In contrast, 12.0% would not employ or recommend such a person, and 20.0% of survey respondents mentioned that it would depend on the specific mental illness.

Would Employ or Recommend Someone for a Job Who Has Been Treated for Mental Illness (Broward County)

Source: • 2008 PRC Quality of Life Survey, Professional Research Consultants [Item 100]
Note: • Asked of all respondents.

- **TREND:** The prevalence (68.0%) of Broward County adults who would employ or recommend for a job someone who has been treated for a mental illness is comparable to the 69.9% reported in 2004.

Viewed demographically, Broward County adults least likely to report that they would employ or recommend a person who has been treated for mental illness include senior adults and Hispanics.

Mental Health Treatment

Inability to Access Mental Health Services

Just 1.8% of Broward adults report that they needed mental health services in the past year but were unable to obtain them.

- This percentage represents approximately 2,450 local residents.

TREND: Statistically unchanged throughout Broward County since 2004.

When these 19 Broward County residents were given a series of reasons for the inability to obtain mental health services in the past year (respondents were allowed more than one reason), many mentioned both **cost** and **lack of adequate insurance coverage**.

Other reasons included **lack of information about available programs**, the **social stigma** attached to mental health treatment, **lack of transportation**, and the **quality of the program**.

Perceived Barriers to Mental Health Care Access

The total sample of respondents was next asked to indicate what they perceive to be the number-one barrier facing people with mental illness who need treatment. Many respondents were uncertain (31.1%), but 12.9% mentioned general **barriers to health care access** and 12.7% cited **cost**.

Other mentioned barriers include **lack of insurance** (9.5%), **lack of knowledge about the symptoms** of mental disorders (9.3%), the **social stigma** associated with mental health issues (8.9%), and **lack of information** about the program (8.1%).

Perceived #1 Barrier Facing People With Mental Illness Who Need Treatment (Broward County)

Source: • 2008 PRC Quality of Life Survey, Professional Research Consultants [Item 98]
Note: • Asked of all respondents.

Prevalence of Depression

Among survey respondents, 7 in 10 (70.7%) have not experienced any depression in the past month. In contrast, 17.4% were depressed at some point in the past month for a “little of the time,” while 8.3% experienced depression “some of the time” last month. The remaining 3.6% of surveyed respondents suffered from depression “most” or “all” of the time last month.

Prevalence of Depression in the Past Month (Broward County)

Source: • 2008 PRC Quality of Life Survey, Professional Research Consultants [Item 68]
Note: • Asked of all respondents.

Viewed by demographic characteristic, respondents more likely to have experienced depression in the past month include those in the lower income and educational breakouts, as well as Blacks and Hispanics in Broward County.

Depressed in the Past Month (Broward County)

 Notes: • Demographic breakouts are among findings in Broward County in 2008.
 • Asked of all respondents.
 • Percentages represent combined "All/Most/Some of the Time" responses.

Access To Health Care

Access to quality care is important to eliminate health disparities and increase the quality and years of healthy life for all persons in the United States... Limitations in access to care extend beyond basic causes, such as a shortage of health care providers or a lack of facilities. Individuals also may lack a usual source of care or may face other barriers to receiving services, such as financial barriers (having no health insurance or being underinsured), structural barriers (no facilities or health care professionals nearby), and personal barriers (sexual orientation, cultural differences, language differences, not knowing what to do, or environmental challenges for people with disabilities).

— Healthy People 2010, 2nd Edition. U.S. Department of Health and Human Services. Washington, DC: U.S. Government Printing Office, November 2000.

Lack of Health Insurance Coverage

A total of 14.6% of Broward County adults aged 18 to 64 have no insurance coverage to pay for health care expenses.

- More favorable than the 25.4% prevalence found throughout Florida.
- Comparable to 17.7% of Americans under 65 without health care insurance coverage.
- Fails to satisfy the Healthy People 2010 goal of universal coverage.

TREND: Similar to the 12.1% reported in Broward County in 1994.

Lack Health Care Insurance Coverage (18-64)

 Notes: • Demographic breakouts are among findings in Broward County in 2008.
 • Reflects those respondents aged 18 through 64.

Lack Coverage for Children

Among local adults with children under 18 at home, 6.6% have no health care insurance coverage for their children.

- No statistical difference among the age breakouts.
- **TREND:** The overall prevalence is statistically unchanged from the 10.0% prevalence reported across Broward County in 1999.

Have No Health Care Insurance Coverage for Child (Broward County)

Source: • PRC Quality of Life Surveys, Professional Research Consultants [Item 144]
 Note: • Asked of respondents with children under the age of 18.

Barriers to Primary Care

This section examines access to preventive care services, including community members' experience with the availability of physician services, and cost as an inhibitor to receiving care.

Cost of Health Services

Children

Among residents in Broward County with children under the age of 18, 8.2% indicate that cost or a lack of insurance prevented their child from receiving health care at some point in the past year.

TREND: Statistically comparable to the 8.1% reported among Broward County parents in 1999.

**Cost Prevented

Note: • Reflects the total sample of respondents.

- The 55.5% prevalence of “excellent/very good” ratings for local health care is more favorable than the 47.7% prevalence reported nationally.
- TREND:** No statistical difference from the 56.3% reported in 1999, despite a *statistically significant decrease* between 1999 and 2006.

Rating of Local Health Care
Perceived to Be “Excellent” or “Very Good”

Source: • PRC Quality of Life Surveys, Professional Research Consultants [Item 6]
• PRC National Health Assessment, Professional Research Consultants, Inc.
Notes: • Reflects the total sample of respondents.
• Percentages represent combined “excellent” and “very good” responses.

- In contrast, the 13.2% prevalence of “fair/poor” ratings for local health care is more favorable than to the 22.2% prevalence reported nationally.
- **TREND:** Comparable to the 14.3% prevalence reported across Broward County in 1999.

Viewed by demographic breakout, adults more likely to give negative local health care ratings include:

- Adults under 65.
- Adults living in the lower income bracket.

Modifiable Health Risks

Overweight Prevalence

Body Mass Index (BMI), which describes relative weight for height, is significantly correlated with total body fat content. The BMI should be used to assess overweight and obesity and to monitor changes in body weight. In addition, measurements of body weight alone can be used to determine efficacy of weight loss therapy. BMI is calculated as weight (kg)/height squared (m^2). To estimate BMI using pounds and inches, use: $[\text{weight (pounds)}/\text{height squared (inches}^2)] \times 703$.

In this report, overweight is defined as a BMI of 25.0 to 29.9 kg/m^2 and obesity as a BMI of $\geq 30 kg/m^2$. The rationale behind these definitions is based on epidemiological data that show increases in mortality with BMIs above 25 kg/m^2 . The increase in mortality, however, tends to be modest until a BMI of 30 kg/m^2 is reached. For persons with a BMI of $\geq 30 kg/m^2$, mortality rates from all causes, and especially from cardiovascular disease, are generally increased by 50 to 100 percent above that of persons with BMIs in the range of 20 to 25 kg/m^2 .

Overweight and obesity result from a complex interaction between genes and the environment characterized by long-term energy imbalance due to a sedentary lifestyle, excessive caloric consumption, or both. They develop in a socio-cultural environment characterized by mechanization, sedentary lifestyle, and ready access to abundant food. Attempts to prevent overweight and obesity are difficult to both study and achieve.

– Clinical Guidelines on the Identification, Evaluation, and Treatment of Overweight and Obesity in Adults: The Evidence Report. National Institutes of Health. National Heart, Lung, and Blood Institute in Cooperation With The National Institute of Diabetes and Digestive and Kidney Diseases. September 1998.

CLASSIFICATION OF OVERWEIGHT AND OBESITY BY BMI		
		BMI (kg/m^2)
Underweight		<18.5
Normal		18.5 – 24.9
Overweight		25.0 – 29.9
Obesity	Obesity Class	
	I	30.0 – 34.9
	II	35.0 – 39.9
Extreme Obesity	III	≥ 40
Source: Clinical Guidelines on the Identification, Evaluation, and Treatment of Overweight and Obesity in Adults: The Evidence Report. National Institutes of Health. National Heart, Lung, and Blood Institute in Cooperation With The National Institute of Diabetes and Digestive and Kidney Diseases. September 1998.		

Based on reported heights and weights, 61.3% of Broward County adults are overweight (BMI ≥ 25).

- Similar to Florida findings (60.7%).
- More favorable than the U.S. overweight proportion (67.4%).

21.8% of Broward County adults are obese (BMI ≥ 30).

- Similar to the Florida prevalence (22.8%).
- More favorable than the U.S. finding (29.0%).
- Fails to satisfy the Healthy People 2010 target (15% or lower).

- **TREND:** Overweight (and obesity) prevalence has *increased significantly* in Broward County since 1999.

Broward County adults more likely to be obese include:

- Middle-aged adults.
- Those without postsecondary education.
- Blacks.

Physical Fitness

Regular physical activity contributes to a longer and healthier life. The health benefits of exercise are irrefutable; it has been asserted that employing regular physical activity toward cardiorespiratory fitness can prevent or limit one's risk for such afflictions as coronary heart disease, hypertension, noninsulin-dependent diabetes mellitus, osteoporosis, obesity, depression, colon cancer, stroke and back injury.

Leisure-Time Physical Activity

Just over one-fifth (22.4%) of survey respondents report no leisure-time physical activity in the past month.

- More favorable than the 26.9% reported across Florida.
- Also more favorable than the 28.8% found nationally.
- Fails to satisfy the Healthy People 2010 objective (20% or lower).
- **TREND:** Statistically unchanged from the 23.9% reported in 1994.

No Leisure-Time Physical Activity

 • Healthy People 2010, National Center for Health Statistics/CDC/Public Health Service
 Notes: • Demographic breakouts are among findings in Broward County in 2008.
 • Asked of all respondents.

Sedentary Lifestyles

Another measure of proper health and physical fitness is the “sedentary” definition which applies to those who do not exercise at least three times per week for at least 20 minutes per occasion.

In Broward County, 56.3% of adults fall into the “sedentary” category.

■ **TREND:** Denotes a statistically significant increase from the 48.1% reported locally in 1994.

Sedentary (Broward County)

 Notes: • Sedentary is defined as exercising less than three times a week for 20 minutes at a time.
 • Asked of all respondents.
 • State and national data not available.

The following chart segments sedentary lifestyles by various demographic characteristics. Note the higher prevalence among Blacks, Hispanics, and adults in the lower education and income categories.

Source: • 2008 PRC Quality of Life Survey, Professional Research Consultants [Item 178]
 Notes: • Demographic breakouts are among findings in Broward County in 2008.
 • Asked of all respondents.
 • Sedentary is defined as exercising less than three times a week for 20 minutes at a time.

Tobacco Use

Cigarette smoking causes heart disease, several kinds of cancer (lung, larynx, esophagus, pharynx, mouth, and bladder), and chronic lung disease. Cigarette smoking also contributes to cancer of the pancreas, kidney, and cervix. Smoking during pregnancy causes spontaneous abortions, low birth weight, and sudden infant death syndrome. Other forms of tobacco are not safe alternatives to smoking cigarettes.

Tobacco use is responsible for more than 430,000 deaths per year among adults in the United States [about 20% of all deaths]... If current tobacco use patterns persist in the United States, an estimated 5 million persons under age 18 years will die prematurely from a smoking-related disease. Direct medical costs related to smoking total at least \$50 billion per year [other sources estimate more than \$75 billion in 1998 (about 8% of the personal health care expenditures in the U.S.)]; direct medical costs related to smoking during pregnancy are approximately \$1.4 billion per year.

Evidence is accumulating that shows maternal tobacco use is associated with mental retardation and birth defects such as oral clefts. Exposure to secondhand smoke also has serious health effects. Researchers have identified more than 4,000 chemicals in tobacco smoke; of these, at least 43 cause cancer in humans and animals. Each year, because of exposure to secondhand smoke, an estimated 3,000 nonsmokers die of lung cancer, and 150,000 to 300,000 infants and children under age 18 months experience lower respiratory tract infections.

– Healthy People 2010, 2nd Edition. U.S. Department of Health and Human Services. Washington, DC: U.S. Government Printing Office, November 2000.

Cigarette Smoking

16.1% of Broward County adults currently smoke cigarettes.

- Similar to statewide findings (15.1%).
- Also statistically similar to the prevalence seen nationally (19.2%).
- Fails to satisfy the Healthy People 2010 target (12% or lower).

TREND: Marks a *statistically significant decrease* in smoking since 1994 in Broward County.

Current Smokers

Sources: • PRC Quality of Life Surveys, Professional Research Consultants [Item 177]
 • Behavioral Risk Factor Surveillance System, Centers for Disease Control, 2005 Florida Data
 • 2008 PRC National Health Survey, Professional Research Consultants
 • Healthy People 2010, National Center for Health Statistics/CDC/Public Health Service
 Note: • Asked of all respondents.

The following chart looks at current smoking prevalence by various demographic characteristics. As shown, cigarette smoking is less prevalent among:

- Adults aged 65 and over.
- Those living at higher income and educational levels.
- Blacks.
- Note also that 19.2% of women of child-bearing age (ages 18 to 44) currently smoke. This is notable given that tobacco use increases the risk of infertility, as well as the risks for miscarriage, stillbirth and low birthweight for women who smoke during pregnancy.

Source: • 2008 PRC Quality of Life Survey, Professional Research Consultants [Item 177]
 Note: • Demographic breakouts are among findings in Broward County in 2008.

Smoking Cessation

46.0% of Broward County regular smokers went without smoking for one day or longer in the past year because they were trying to quit smoking.

- Similar to statewide findings (54.1%).
- Statistically similar to national findings (57.0%).
- Fails to satisfy the Healthy People 2010 target (75% or higher).

TREND: Statistically unchanged from the 52.1% prevalence noted locally in 2004.

Have Stopped Smoking for One Day or Longer in the Past Year in an Attempt to Quit Smoking (Among Adults Who Smoke Cigarettes Every Day)

- Notes:
- Asked of regular (everyday) smokers.
 - Florida data not available.

Substance Abuse

Substance abuse and its related problems are among society's most pervasive health and social concerns. Each year, about 100,000 deaths in the United States are related to alcohol consumption. Illicit drug abuse and related acquired immunodeficiency syndrome (AIDS) deaths account for at least another 12,000 deaths. In 1995, the economic cost of alcohol and drug abuse was \$276 billion. This represents more than \$1,000 for every man, woman, and child in the United States to cover the costs of health care, motor vehicle crashes, crime, lost productivity, and other adverse outcomes of alcohol and drug abuse.

A substantial proportion of the population drinks alcohol... Alcohol use and alcohol-related problems also are common among adolescents. Excessive drinking has consequences for virtually every part of the body. The wide range of alcohol-induced disorders is due (among other factors) to differences in the amount, duration, and patterns of alcohol consumption, as well as differences in genetic vulnerability to particular alcohol-related consequences... Alcohol use has been linked with a substantial proportion of injuries and deaths from motor vehicle crashes, falls, fires, and drownings. It also is a factor in homicide, suicide, marital violence, and child abuse and has been associated with high-risk sexual behavior...

Illegal use of drugs, such as heroin, marijuana, cocaine, and methamphetamine, is associated with other serious consequences, including injury, illness, disability, and death, as well as crime, domestic violence, and lost workplace productivity. Drug users and persons with whom they have sexual contact run high risks of contracting gonorrhea, syphilis, hepatitis, tuberculosis, and human immunodeficiency virus (HIV). The relationship between injection drug use and HIV/AIDS transmission is well known. Injection drug use also is associated with hepatitis B and C infections... Long-term consequences, such as chronic depression, sexual dysfunction, and psychosis, may result from drug use.

Although there has been a long-term drop in overall use, many people in the United States still use illicit drugs... Drug use among adolescents aged 12 to 17 years doubled between 1992 and 1997... Drug and alcohol use by youth also is associated with other forms of unhealthy and unproductive behavior, including delinquency and high-risk sexual activity.

The stigma attached to substance abuse increases the severity of the problem. The hiding of substance abuse, for example, can prevent persons from seeking and continuing treatment and from having a productive attitude toward treatment. Compounding the problem is the gap between the number of available treatment slots and the number of persons seeking treatment for illicit drug use or problem alcohol use.

— Healthy People 2010, 2nd Edition. U.S. Department of Health and Human Services. Washington, DC: U.S. Government Printing Office, November 2000.

Alcohol Use

“Current” drinkers are those who have had one or more drinks within the past month (for the purpose of this study, a “drink” is defined as one can or bottle of beer, one glass of wine, one can or bottle of wine cooler, one cocktail or one shot of liquor).

A total of 60.8% of adults in Broward County are considered “current drinkers.”

- Higher than the 55.6% found across Florida and the 52.6% prevalence recorded nationally.
- ▣ **TREND:** No change since 1994, despite a *statistically significant decrease* between 1994 and 2006.

Current Drinkers

Sources: • PRC Quality of Life Surveys, Professional Research Consultants [Item 179]
 • 2008 PRC National Health Survey, Professional Research Consultants
 • Behavioral Risk Factor Surveillance System, Centers for Disease Control, 2005 Florida Data

Notes: • Current drinkers are defined as those who have had any alcoholic beverages during the past month.
 • Reflects the total sample of respondents.

The following population segments are more likely to be current drinkers:

- Men in Broward County.
- Adults under 65.
- Adults in the higher education category.
- Adults living at higher incomes.
- Whites and Hispanics.

Current Drinkers (Broward County)

Notes: • Demographic breakouts are among findings in Broward County in 2008.
 • Reflects the total sample of respondents.
 • Current drinkers are defined as those who have had any alcoholic beverages during the past month.

Preventive Care

Preventive care in Broward County — including regular medical and dental checkups, children's checkups, and cancer screenings — is examined in the following section.

Routine Physician Care

8 in 10 (81.3%) adults in Broward County visited a physician for a routine checkup within the past year.

- More favorable than the 73.2% recorded statewide.
- Also more favorable than the 65.2% prevalence found nationwide.
- ▣ **TREND:** Marks a *statistically significant increase* since the 1994 survey was conducted in Broward County (73.4% prevalence of routine checkups).

Have Visited a Physician for a Routine Checkup Within the Past Year

Sources: • PRC Quality of Life Surveys, Professional Research Consultants [Item 8]
• 2008 PRC National Health Survey, Professional Research Consultants
• Behavioral Risk Factor Surveillance System, Centers for Disease Control, 2005 Florida Data

Notes: • Asked of all respondents.
• State data not available.

Regular physician visits are more likely among the following population segments:

- Women.
- Adults aged 65 and older.
- Whites and Blacks.

• 2008 PRC National Health Survey, Professional Research Consultants, Inc.
Note: • Asked of all respondents aged 65 and older.

Cancer Screenings

Cancer, the second leading cause of death among Americans, is responsible for one of every four deaths in the United States. In 2003, over half a million Americans—or more than 1,500 people a day—will die of cancer. Black Americans are more likely to die from cancer than people of any other racial or ethnic group.

The financial costs of cancer are staggering. According to the National Institutes of Health, cancers cost the United States more than \$170 billion in 2002. This includes more than \$110 billion in lost productivity and over \$60 billion in direct medical costs.

The number of new cancer cases can be reduced substantially, and many cancer deaths can be prevented. Healthier lifestyles can significantly reduce a person's risk for cancer—for example, avoiding tobacco use, increasing physical activity, improving nutrition, and avoiding sun exposure. Making cancer screening and information services available and accessible to all Americans is also essential for reducing the high rates of cancer and cancer deaths. Screening tests for breast, cervical, and colorectal cancers reduce the number of deaths from these diseases by finding them early, when they are most treatable. Screening tests for cervical and colorectal cancers can actually prevent these cancers from developing by detecting treatable precancerous conditions.

– National Center for Chronic Disease Prevention and Health Promotion, Centers for Disease Control and Prevention

Colorectal Cancer

Digital Rectal Examination

A **digital rectal exam** is a screening procedure in which a physician or other health professional inserts a finger into the rectum to check for colorectal cancer and other health problems.

51.7% of residents aged 50 and older had a digital rectal exam within the past year.

- Ranges from 64.9% among Broward males aged 50+ to 40.4% among women 50+.

▣ **TREND:** Marks a *statistically significant decrease* from the 67.1% reported countywide in 1994.

Have Had a Digital Rectal Examination Within the Past Year (50+)

(Broward County)

Source: • PRC Quality of Life Surveys, Professional Research Consultants [Item 194]

Note: • Asked of all respondents aged 50 and older.

Colonoscopy

Another method of screening for colorectal cancer a **colonoscopy examination**, in which a tube is inserted in the rectum.

More than 7 in 10 (71.8%) Broward residents aged 50+ have had a colonoscopy.

- Ranges from 77.8% among men aged 50+ to 65.0% among women 50+.
- Higher with age (from 66.1% among those 50-64 to 76.7% among those 65+).

Source: • PRC Quality of Life Surveys, Professional Research Consultants [Item 60]

Note: • Asked of all respondents aged 50 and older.

Female Breast Cancer

Mammography

Screenings for female breast cancer are recommended as outlined below:

- Yearly mammograms starting at age 40 and continuing for as long as a woman is in good health.
- Clinical breast exams (CBE) should be part of a periodic health exam, about every three years for women in their 20s and 30s and every year for women 40 and over.
- Women should report any breast change promptly to their health care providers. Breast self-exam (BSE) is an option for women starting in their 20s.
- Women at increased risk (e.g., family history, genetic tendency, past breast cancer) should talk with their doctors about the benefits and limitations of starting mammography screening earlier, having additional tests (e.g., breast ultrasound or MRI), or having more frequent exams.

— American Cancer Society

In Broward County, 86.1% of women aged 40 and older had a mammogram in the past two years.

- More favorable than the 76.5% found across Florida and the 74.6% national prevalence.

▣ **TREND:** *Statistically higher* than the Broward County prevalence recorded in 1994 (75.2%).

Had a Mammogram in the Past 2 Years (Women 40+) (Broward County)

Source: • PRC Quality of Life Surveys, Professional Research Consultants [Item 185]

• 2008 PRC National Health Survey, Professional Research Consultants
• Healthy People 2010, National Center for Health Statistics/CDC/Public Health Service

Note: • Reflects women aged 40 and over.

- Note that 78.1% of Broward County women aged 50+ have had both a mammogram and a clinical breast exam by a physician in the past two years.

Cervical Cancer

Pap Smear Testing

Screenings for cervical cancer are recommended as outlined below:

- All women should begin cervical cancer screening about 3 years after they begin having vaginal intercourse, but no later than when they are 21 years old. Screening should be done every year with the regular Pap test or every 2 years using the newer liquid-based Pap test.
- Beginning at age 30, women who have had 3 normal Pap test results in a row may get screened every 2 to 3 years with either the conventional (regular) or liquid-based Pap test. Women who have certain risk factors such as diethylstilbestrol (DES) exposure before birth, HIV infection, or a weakened immune system due to organ transplant, chemotherapy, or chronic steroid use should continue to be screened annually.
- Another reasonable option for women over 30 is to get screened every 3 years (but not more frequently) with either the conventional or liquid-based Pap test, *plus* the HPV DNA test.
- Women 70 years of age or older who have had 3 or more normal Pap tests in a row and no abnormal Pap test results in the last 10 years may choose to stop having cervical cancer screening. Women with a history of cervical cancer, DES exposure before birth, HIV infection or a weakened immune system should continue to have screening as long as they are in good health.
- Women who have had a total hysterectomy (removal of the uterus and cervix) may also choose to stop having cervical cancer screening, unless the surgery was done as a treatment for cervical cancer or precancer. Women who have had a hysterectomy without removal of the cervix should continue to follow the guidelines above.

– American Cancer Society

Note that other organizations (e.g., American Academy of Family Physicians, American College of Physicians, National Cancer Institute, US Preventive Services Task Force) may have slightly different screening guidelines.

The majority of women in Broward County (85.0%) had a Pap smear within the past 3 years.

- Comparable to the 84.8% found across Florida.
- Comparable to the 81.3% nationwide prevalence.
- Fails to satisfy the Healthy People 2010 objective of 90% or higher.

 **TREND:** Statistically unchanged from the 83.8% recorded locally in 1994.

 • Asked of all respondents.

Children

Among adults in Broward County with children under 18 years old, 77.3% report that their child has visited a dentist for routine care in the past year.

- Lower than the 85.1% recorded nationally in 2008.
- When segmented by the child's age, area children *over* the age of 5 more often received dental care in the past year.
- Satisfies the Healthy People 2010 objective of 56% or higher.

TREND: *Statistically higher than the 1997 prevalence in Broward County.*

SAFETY

Crime

Violence claims the lives of many of the Nation's young persons and threatens the health and well-being of many persons of all ages in the United States. On an average day in America, 53 persons die from homicide, and a minimum of 18,000 persons survive interpersonal assaults, 84 persons complete suicide, and as many as 3,000 persons attempt suicide.

Youth continue to be involved as both perpetrators and victims of violence. Elderly persons, females, and children continue to be targets of both physical and sexual assaults, which are frequently perpetrated by individuals they know.

– Healthy People 2010, 2nd Edition. U.S. Department of Health and Human Services. Washington, DC: U.S. Government Printing Office, November 2000.

The safety of a community plays an integral part of the overall quality of life. The following section examines various facets of crime in Broward County as perceived by community members.

Victimization

A total of 3.7% of adults in Broward County report having been the victim of a violent crime within the past 5 years (this translates to nearly 50,400 adults in the area).

- Similar to the 2.4% prevalence found throughout the U.S.

TREND: Statistically unchanged from the 1994 Broward County prevalence (4.3%).

Note: • Asked of those respondents who looked for housing in the past year.

Children's Services

Many of today's families include dual-income parents, often presenting the problem of locating quality child care on a regular basis. The following sections explore Broward County parents' abilities to obtain child care in the past year.

General Child Care

A total of 31.2% of local parents with children under the age of 18 living in the household have used paid child care at some point in the past year, with 12.1% of those parents receiving financial assistance for this care.

(This indicator reflects use of paid child care for any child living in the household.)

Source: • PRC Quality of Life Surveys, Professional Research Consultants [Item 151-152]
Note: • Asked of all respondents with children at home.

Use of Children's Services

Among residents with children under 18 at home, 26.5% indicate their child (any child in the household) has been involved in an after-school program.

- Another 7.1% of Broward County children have used mental health services such as counseling, and another 7.1% have utilized services for children with special needs.
- Only 0.7% of survey respondents report that their child has used alcohol/drug services.

Utilization of Services for Children in the Past Year

(Broward County Households With Children Under 18)

Source: • 2008 PRC Quality of Life Survey, Professional Research Consultants [Items 153-156]

Notes: • Asked of all respondents.
• Percentages represent "yes" responses to the question.

Difficulty Obtaining Children's Services

Area parents were asked whether they encountered any of seven specific types of difficulties obtaining services (such as child care, after-school programs, mental health care, alcohol or drug treatment, or services for children with special needs) for their children in the past year (reflecting difficulties obtaining services for any child living in the household).

The top-cited reason among those asked was **cost**, followed by difficulty because the **child had a temporary contagious illness** such as a cold, the flu, or chicken pox. Other frequently mentioned reasons include **lack of information about where the service is provided**, and **lack of available care** (including late-evening care, weekend care and quality care).

Specific Difficulty Obtaining Services for Children in the Past Year (Among Parents of Children Under 18 in Broward County)

Source: • 2008 PRC Quality of Life Survey, Professional Research Consultants [Items 157-164]

Note: • Asked of all respondents with children under 18 at home.

• In this case the term "services for children" includes such things as child care, after-school programs, mental health care, alcohol or drug treatment, or services for special needs.

Social Harmony

The following section examines residents' feelings on some of the social relations in Broward County (such as race, cultural, and religious relations).

Race Relations

The vast majority of local adults gave positive ratings of race relations in the Broward County community this year.

- Overall, 41.2% of adults feel that race relations in the community are "excellent" or "very good."
- Another 42.4% gave "good" reviews, while 16.4% of local adults feel that race relations are "fair" to "poor."

TREND: The 41.2% of Broward County adults who consider local race relations to be "excellent" or "very good" denotes a *statistically significant increase* from the 32.4% reported locally in 1999.

Rating of Race Relations in the Community
(Broward County)

 • Percentages represent "fair" or "poor" responses to the question.

Transportation

Community members in Broward County were next asked for their opinions on the current ways in which Broward County spends money on certain aspects of transportation. Respondents were given five transportation issues and asked whether Broward County currently spends “too much,” “enough,” or “not enough” money on each specific issue.

A totally of 64.9% of Broward County residents do not feel the county is spending enough money on public transit.

TREND: Marks a *statistically significant increase* from the 57.2% reported in 2004.

Just over one-half (53.5%) of Broward County residents do not feel the county is spending enough money on sidewalks and/or bike paths.

TREND: Similar to the 50.9% found across the county in 2004.

Just under one-half (49.0%) of Broward County residents do not feel the county is spending enough money on road safety.

TREND: Marks a statistically significant decrease from the 55.4% reported in Broward County in 2004.

Another 46.3% of community members do not feel the county is spending enough money on adding lanes to existing roads.

TREND: Denotes a statistically significant decrease from the 51.9% reported in the area in 2004.

ENVIRONMENT

Water Quality & Conservation

The following section describes such environmental issues as the quality and availability of future drinking water supplies, water conservation in the home, and recycling of such materials as cans, glass, and paper.

Drinking Water

More than 8 in 10 survey respondents (81.5%) indicate concern about the quality and availability of future drinking water supplies.

TREND: *Statistically higher than the 75.5% reported locally in 2004.*

Concerned About Quality and Availability of Future Drinking Water Supplies
(Broward County)

Source: • PRC Quality of Life Surveys, Professional Research Consultants [Item 94]
Notes: • Asked of all respondents.
• Percentages represent "yes" responses to the inquiry.

Middle-aged adults are more likely to be concerned about the quality and availability of future drinking water supplies.

Concerned About Quality and Availability of Future Drinking Water Supplies (Broward County)

Source: • 2008 PRC Quality of Life Survey, Professional Research Consultants [Item 94]
 Notes: • Demographic breakouts are among findings in Broward County in 2008.
 • Asked of all respondents.
 • Percentages represent "yes" responses to the inquiry.

Water Conservation

A total of 67.8% of Broward County residents have devices, equipment, or practices in the home which help to conserve water.

TREND: Nearly identical to the 67.5% reported throughout Broward County in 2004.

Have Devices, Equipment, or Practices in the Home Which Help to Conserve Water (Broward County)

Source: • PRC Quality of Life Surveys, Professional Research Consultants [Item 95]
 Notes: • Asked of all respondents.
 • Percentages represent "yes" responses to the inquiry.

Broward County adults 40 and over, those with a postsecondary education, Whites and Hispanics are more likely to conserve water in the home.

Have Devices, Equipment, or Practices in the Home Which Help to Conserve Water (Broward County)

 Notes: • Demographic breakouts are among findings in Broward County in 2008.
 • Asked of all respondents.
 • Percentages represent "yes" responses to the inquiry.

Recycling

More than one-half (55.1%) of community residents report “always” recycling such materials as cans, glass, or paper. Another 16.4% do so “most of the time.”

- In contrast, 13.3% of survey respondents “sometimes” recycle, while 15.2% claim that they “never” do so.

TREND: The 15.2% “never” prevalence is statistically unchanged from the 16.8% reported across Broward County in 2004.

Frequency of Recycling Cans, Glass, or Paper
(Broward County)

Note: • Asked of all respondents.

“Never” Recycle Cans, Glass, or Paper
(Broward County)

Source: • 2008 PRC Quality of Life Survey, Professional Research Consultants [Item 96]
Note: • Asked of all respondents.
• Percentages represent “never” responses among the total sample.

Adults more likely to “never” recycle include:

- Young adults and seniors.
- Those without a postsecondary education.
- Those living at lower incomes.
- Blacks.

"Never" Recycle Cans, Glass, or Paper (Broward County)

Source: • 2008 PRC Quality of Life Survey, Professional Research Consultants [Item 96]
Notes: • Demographic breakouts are among findings in Broward County in 2008.
• Asked of all respondents.
• Percentages represent "never" responses to the inquiry.

GOVERNMENT

State Government

When asked to rate the State of Florida's government, 12.8% of survey respondents gave "excellent" or "very good" indications, while 33.9% gave "good" ratings of the job that the state government is doing.

- In contrast, more than one-half (53.3%) of community members gave "fair" or "poor" evaluations of the state government.

TREND: The 12.8% of survey respondents who gave "excellent" or "very good" reports is statistically unchanged from the 14.0% "excellent/very good" ratings given in Broward County in 2004.
